

# VISHAL YADAV

Senior Backend Engineer • Node.js • TypeScript • AWS Serverless & Microservices

vishalyadav7171@gmail.com • +91-8576008579 • [linkedin.com/in/vishalyadav0001](https://www.linkedin.com/in/vishalyadav0001) • [vishal-portfolio-neon.vercel.app](https://vishal-portfolio-neon.vercel.app)

## PROFESSIONAL SUMMARY

Senior Backend Engineer with 5+ years building scalable, event-driven backend systems in Node.js and TypeScript on AWS. Deep experience with serverless microservices (Lambda, API Gateway, SQS, SNS, DynamoDB, RDS), REST APIs, PostgreSQL and MongoDB data modelling, Redis caching, and infrastructure-as-code with Terraform. Strong on CI/CD (Jenkins), test-driven development (Jest, Vitest), and delivering high-throughput services at scale for enterprise clients including Arm Holdings and Under Armour. Also ships production LLM/RAG features on Azure OpenAI where the backend calls for it, and owns architecture end-to-end while leading engineers in Agile teams.

## TECHNICAL SKILLS

|                    |                                                                                         |
|--------------------|-----------------------------------------------------------------------------------------|
| Languages          | Node.js, TypeScript, JavaScript (ES6+), Express.js, PHP, Laravel                        |
| Cloud & Serverless | AWS Lambda, API Gateway, SQS, SNS, S3, DynamoDB, RDS, EC2, CloudFront                   |
| Databases          | PostgreSQL, MongoDB, DynamoDB, Redis, Elasticsearch, MySQL                              |
| APIs & Arch        | REST, GraphQL, Microservices, Event-Driven Architecture, Apache Kafka                   |
| DevOps & IaC       | Terraform, Jenkins, CI/CD Pipelines, Git, Bitbucket, AWS CLI, Docker                    |
| Testing            | Jest, Vitest, TDD, SonarQube                                                            |
| AI Integration     | RAG, Azure OpenAI, Vector Embeddings, Semantic Search (applied within backend services) |
| Payments           | Stripe, Razorpay, PayPal, Twilio                                                        |

## PROFESSIONAL EXPERIENCE

**Software Engineer – Backend** • Innovify • Client: Arm Holdings plc (semiconductor IP) Feb 2025 – Mar 2026

- Architected and deployed production-grade serverless microservices on AWS Lambda, API Gateway, SQS, S3, DynamoDB and RDS powering Arm’s enterprise backend workflows at scale.
- Designed event-driven, high-throughput backend APIs in Node.js and TypeScript for automated decision-making and data-processing pipelines, with SQS-based decoupling and fault isolation.
- Modelled and optimised relational and NoSQL data layers (PostgreSQL/RDS, DynamoDB); tuned queries and access patterns for low-latency reads under load.
- Built CI/CD pipelines and enforced test coverage (Jest) and code-quality gates across services in an Agile delivery cycle.
- AI integration:** built a Node.js RAG service on Azure OpenAI (document chunking, embeddings, vector similarity search) exposed via clean orchestration APIs for enterprise knowledge retrieval.

**Backend Engineer** • Kratin Software Solutions • Client: Lunajoy Health Apr 2024 – Feb 2025

- Led end-to-end backend development of an appointment-booking platform in Node.js, improving booking efficiency by 30%.
- Built and optimised serverless functions on AWS Lambda with DynamoDB and S3; managed patient data on RDS + PostgreSQL, cutting data-retrieval time by 25%.
- Integrated MongoDB for flexible large-scale storage and a HIPAA-compliant document viewer for medical reports.
- Delivered Stripe tokenization and payment-gateway integration, raising successful payment completion rates by 20%.

**Technology Lead – Node.js** • Mobiloitte Technology Pvt Ltd Oct 2023 – Apr 2024

- Led a backend team across concurrent projects — task allocation, architecture decisions, code reviews, and conflict resolution.
- Delivered multiple Node.js platforms end-to-end (marketplace, event management, e-wallet) with Stripe and PayPal payment flows.
- Built real-time sync services and scalable backend foundations for simultaneous client deployments; mentored junior engineers in Node.js patterns and API design.

**Sr. Software Developer** • Mckinsol Consulting Inc. • Clients: Under Armour, PVH, GXP Feb 2021 – Aug 2023

- Designed and deployed backend APIs in Node.js with AWS Lambda, S3, and DynamoDB across multiple enterprise client projects.
- Delivered HR Portal, SAP Request Management, and a crowdfunding platform; integrated Razorpay with full payment-flow design, error handling, and reconciliation. Performed code reviews and enforced engineering best practices across distributed teams.

## PERSONAL PROJECTS

**GenAI Portfolio with RAG Chatbot** • Self-initiated • [vishal-portfolio-neon.vercel.app](https://vishal-portfolio-neon.vercel.app)

- Node.js backend serving a real-time RAG chatbot — document chunking, embedding pipeline, vector similarity search, and LLM response generation via Azure OpenAI, exposed over a REST API and deployed on Vercel.

**Multi-Source Sync Service** • [github.com/vishal-yadav-dev/multi-source-sync-service](https://github.com/vishal-yadav-dev/multi-source-sync-service)

- Node.js/TypeScript pipeline syncing HubSpot, Google Calendar, and Stripe into Postgres with idempotency (composite key + SHA-256 content hash), two-level fault isolation, and reactive stale-cursor fallback. Stack: Express, Knex, Neon Postgres, Vitest.

## CORE COMPETENCIES

Serverless Architecture • Event-Driven Systems • Microservices • API Design • Cloud-Native Backend (AWS) • Infrastructure as Code • Payment Integrations • Team Leadership • Agile / Scrum

## CERTIFICATIONS

IBM – What is Data Science (Coursera)  
IBM – Data Analysis with Python (Coursera)
